David Chang (張逸)

- Title: **AI Team TechLead**
- Contact: black.heptagram@gmail.com • github.com/j129008
- Education: M.S. in Computer Science, National Chengchi University • B.S. in Computer Engineering, National Chiao Tung University

Summary

- 6+ years of backend development experience, grown from engineer to Tech Lead, focusing on AI system architecture and LLM application deployment
- Cross-domain experience spanning AI chatbot, live streaming, advertising platforms, recommendation systems, and document parsing (Python, FastAPI, LangGraph, RAG)

Experience

Riversoft, AI Team TechLead

2025-04 ~ Present

- Architecture: **Led architecture design across diverse AI systems — travel AI agent platform, multi-format document parsing into structured ERP data, medical document OCR pipeline, disaster reporting pipeline (LINE Bot ingestion + LLM parsing + frontend), travel order automation, and AI conversation operations center** (LangGraph, GraphRAG, GPT-4 Vision, MCP)
- Project Management: **Sprint and Milestone planning across multiple product lines, coordinating estimation, task assignment, and cross-team requirements**
- Technical Support: **Risk assessment, troubleshooting, Code Review, and technical decision-making; designed a cross-team MCP Tool validation framework to standardize AI agent integrations**

Koodata, Back-end Engineer

2021-07 ~ 2025-03

MVP Rapid Development (2023-11 ~ 2025-03)

- **Designed architecture for advertising products (Ad Bingo Card, multi-platform campaigns, approval systems) and established development workflows**

koo-social Advertising Data Reporting (2022-10 ~ 2023-11)

- **Built ad data crawlers, chart tools, and report systems; optimized data processing speed** (Cloud Run, Selenium, Looker Studio)

koolive Live Streaming (2021-07 ~ 2023-10)

- **Designed live streaming system with stress testing for high-concurrency (QPS 1000+), supported FoodPanda live events** (Django, Redis, GraphQL, K8S)
- **Fixed message loss/duplication, implemented payment and third-party integrations** (Celery, Thread, DB Transaction)

Truelove, Back-end Engineer

2020-03 ~ 2020-09

- **Established unit testing environment, validated salary reports, optimized API reducing DB load by 50%** (Pytest, Docker, Pandas, Flask, Redis)

Ovomedia, Software Engineer

2019-03 ~ 2020-03

- **Collaborated with NTUST AI Center on TV recommendation system, built data labeling website and engine** (Django, Keras, Pandas, MariaDB)
- **Integrated FarEasTone smart speaker control and updated membership center** (OAuth2, Docker, PHP Phalcon)

Skills

Programming: Python
AI & ML: LangChain/LangGraph, RAG/GraphRAG, GPT-4 Vision, MCP
Backend: FastAPI, Django, Celery
Database: PostgreSQL, Neo4j, Elasticsearch, Redis
